Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                       ·;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   thrombin-induced platelet; prevention; platelet aggregation;
rheumatoid arthritis, and ocular disorders comprises a kininogen domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Administration of a peptide or multimer related to bradykinin or other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disclosed peptides and multimers can be used for the inhibition of thrombin induced platelets or other cells. They can also be used for preventing platelet aggregation, or inhibiting ADP-induced activation. This is useful to prevent arterial occlusions arising from coronary theomors and stroke.
                                                                       The present sequence is that of a D3 peptide derived from human high mol.wt. kininogen (HK) domain 3 (see AAY95426). The D3 peptide inhibits endothelial cell proliferation and thus possesses anti-angiogenic activity. It is an example of D3 peptides of the invention (see AAY95405-26) that are analogues of certain sites in the HK domain 3, in this case amino acid residues Asn275-Lys282. The peptides inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting angiogenesis.
                                                                                                                                                                                                                  inhibiting endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rheumatoid arthritis, and ocular disorders characterized by undesired vascularization of the retina are treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        οţ
                                                                                                                                                                                                                                                                                                                                                             . :0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        platelet activation and aggregation - by admin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      high mol. wt. Kininogen (HK) domain 3 (see AAV55426). The D3 peptide inhibits endothelial cell proliferation and thus possesses anti-anglogenic activity. It is an example of D3 peptides of the invention (see AAV59405-26) that are analogues of certain sites in the HK domain 3, in this case amino acid residues Asn275-Lys282. The peptides inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting anglogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell proliferation of the retina are treated. The IC50 value for the present peptide was less than 0.8 uM for inhibition of fibroblast growth factor-induced HUVEC cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Composition for inhibiting angiogenesis and endothelial cell proliferation, inducing endothelial cell apoptosis and treating cancer, rheumatoid arthritis, and ocular disorders comprises a kininogen domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
Anti-angiogenic; angiogenesis; inhibitor; kininogen; homologue; endothelial cell proliferation; apoptosis; cancer; ocular disorder; rheumatoid arthritis; cytostatic; antiarthritic; antirheumatic; therapy; human; D3 peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of a D3 peptide derived from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The specification describes a method for identifying a peptide having a particular function. The method comprises preparing a database of polymorloeotides and polypeptides of unknown functions, screening the database for a combination of nucleotides or amino acids indicative of the peptide with a particular function, and identifying polymucleotides and proteins which contain the peptide. The method is used to identify precursor peptides with an amidated C-terminus, especially polypeptide hormones, for studying physiologically active substances. The present sequence represents a peptide which was identified using the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying peptide with selected function, useful particularly for C-amidated hormones, by screening database for combination of nucleic acid and amino acid sequences
                                                                                                                                                      Precursor peptide; polypeptide hormone; peptide identification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            high mol.wt. Kininogen (HK) domain 3 (see AAY95426). The D3 peptide inhibits endothelial cell proliferation and thus possesses anti-anglogenic activity. It is an example of D3 peptides of the invention (see AAY95405-26) that are analogues of certain sites in the HK domain 3, in this case amino acid residues Asn275-Lys282.

The peptides inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting anglogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rheumatoid arthritis, and ocular disorders characterized by undesired vascularization of the retina are treated. The IC50 value for the present peptide was less than 0.8 um for inhibition of fibroblast growth factor-induced HUVEC cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Composition for inhibiting angiogenesis and endothelial cell proliferation, inducing endothelial cell apoptosis and treating cancer, rheumatoid arthritis, and ocular disorders comprises a kininogen domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of a D3 peptide derived from human high mol.wt. kininogen (HK) domain 3 (see AAY95426). The D3 peptide

                                                                                                                                                                                                                                                                                                           The present sequence is that of an N-terminal fragment of a novel anti-angiogenic D3 peptide (see AAY95408) derived from human high mol. W. Kininogen (HK) domain 3 (see AAY95405). The full-length D3 peptide inhibits endothelial cell proliferation and thus possesses anti-angiogenic activity. It is an example of peptides of the invention (see AAY95405-26) that are analogues of certain sites in the HK domain 3. The peptides inhibit endothelial cell proliferation and may also induce endothelial call apoptosis. Compositions including the peptides are used in claimed methods for inhibiting angiogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rhemmatoid arthritis, and ocular disorders characterized by undesired vascularization of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Composition for inhibiting angiogenesis and endothelial cell proliferation, inducing endothelial cell apoptosis and treating cancer, rheumatoid arthritis, and ocular disorders comprises a kininogen domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of a C-terminal fragment of a novel anti-anglogenic D3 peptide (see AAY95408) derived from human high mol.wt. kininogen (HX) domain 3 (see AAY95426). The full-length D3 peptide inhibits endothelial cell proliferation and thus possesses anti-anglogenic activity. It is an example of peptides of the invention (see AAY95405-26) that are analogues of certain sites in the HX domain 3. The peptides inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting angiogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rheumatoid arthritis, and ocular disorders characterized by undesired vascularization of the retina are treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                              à
                                                                                                                                                                                                  ö
                                                              The present invention relates to inhibition of the enzymatic activity of legumain or a legumain-related endopeptidase by cystatin. The inhibition involves an interaction between legumain and a papain-non-reactive site of cystatin. Legumain (EC 3.4.22.34) is a cysteine endopeptidase, and performs a protein-processing function. The present sequence is a peptide fragment of human kininogen D3, which was used in the present invention. Kininogen is a type 3 cystatin. The present sequence is thought to be involved in a legumain-inhibitory site.

Composition for inhibiting angiogenesis and endothelial cell proliferation, inducing endothelial cell apoptosis and treating cancer, rheumatoid arthritis, and ocular disorders comprises a kininogen domain
                                                                                                                                                                                                                                    The present sequence is that of a D3 peptide derived from high mol.wt. kininogen (HK) domain 3 (see AAY95426). The D3 peptide, which may optionally include N-terminal and/or C-terminal protecting groups, inhibits endothelial cell proliferation and thus possesses anti-angiogenic activity. It is an example of peptides of the invention (see AAY95405-26) which are analogues of certain sites in the HK domain 3, in this case amino acids Asn275-Lys282. The peptides inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including such peptides are used in claimed methods for inhibiting angiogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rheumatoid arthritis, and ocular disorders characterized by undesired vascularization of the retina are treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Monoclonal antibody; MAb; lipoteichoic acid; gram positive; bacteria; immunoglobulin; phagocytosis; infection; epitope; peptide mimic; mAb 96-110.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAR85153-R85156 are human antibody ONS-W21 light variable region framework regions (FRs). They were used in the construction of a human/murine chimeric antibody, reactive with human medulloblastoma (a brain tumour) cells. The chimeric antibody can be used in the diagnosis and treatment of this disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Reconstituted antibody against human medullo:blastoma cells - contains high proportion of human antibody origin and has low
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 32;

acid of gram positive bacteria, where the MAb is a chimeric immunoglobulin comprising at least part of a human immunoglobulin comprising at least part of a human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria. The autibodies bind to whole bacteria and enhance phagocytosis and killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial infections. Sequences AAW94740-44 represent light chain variable regions of the antibody send in variable regions of the antibote of the antibody send in variable regions of the antibote of the antibody 96-100.
                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The human framework sequence FR3 was used in the prodn. of humanised monoclonal antibodies comprising antigen binding sites (CDR8) of non human origen based on consensus sequence of CDRs. The sequence is a light chain framework region. The humanised antibodies or their chimeric variants may be used as therapeutic or diagnostic agents in order to combat e.g. glioma, melanoma or carcinoma. See also AAR27299-300 and AAR27037-51.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   treatment and diagnosis of tumours, e.g. melanoma and carcinoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chain variable region framework region (FR) 3. The sequences of FR1-4 (AR77204-7) were used in conjunction with the complementarity determining regions 1-3 (AAR77201-3) to construct a chimaeric antibody against human interleukin-6 (IL-6). The vectors AAQ75914-7 express constructs encoding fragments of a chimaeric antibody to the human IL-6 comparising (a) a light chain with (1) a variable region containing 3 CDR (AAR77201-3) inserted into several framework regions (FR) (AAR77204-7) and (11) a human light chain constant region and (b) a heavy chain with (1) a variable region. The FR of the light chain may be mouse derived (AAQ75889) or from the human antibody REI. The heavy chain FR may also be mouse derived (AAQ75889) or from the human antibody DAW. The antibodies can be used in the treatment of IL-6 related disorders. The antibodies can be used in the treatment of IL-6 related disorders. The antibodies are useful as they have low
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

ARR96286-R96293 represent framework regions (FR) for a humanised monoclonal antibody (Ab) specific for the human epidermal growth factor (EGF) receptor. This Ab binds to human EGF-R, and inhibits binding of EGF to the EGF-R. The humanised Ab comprises antigen binding of EGF to the EGF-R. The humanised Ab comprises antigen binding of EGF to the EGF-R and constant reasons (CDR's) of non-human origin, and FRs of the variable and constant regions of indunent and eavy chain of the main acid sequence of a gamma-1 chain. The constant light chain region used comprises the kappa chain of a human region used comprises the kappa chain of a human constant light chain region used comprises the kappa chain of a human to immunoglobulin. High levels of EGF-R have been detected in malignant tumours, ovarian tumours, colonic tumours, lung tumours, bladder tumours, ovarian tumours, colonic tumours, lung tumours, brain tumours and tumours of the oesophagus. The presence of EGF-R in tumour cells an indicator of a poor prognosis (particularly in human breast cancer). The Ab can therefore be used for diagnostic localisation and assessment of tumour growth. The Ab can also be used in the design of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Framework regions (AARB7041-44) of human group I (gpl) germ line antibody light chain showed homology to corresponding regions (AARB7045-48, respectively) of the rat anti-human interlewin-5 monoclonal antibody 39D10 light chain (see AARB7040). This homology was utilised in the prodn. of a humanised 39D10 VL (AARB7057) in which rat 39D10 VL complementarity determining regions were grafted into the human gpl framework.
                                                                                                                                     Anti-human IL-5 recombinant antibody - useful for preventing or reducing eosinophilia and for treating certain allergic diseases,
                                                            (CLLT ) CELLTECH THERAPEUTICS LTD.

                                                                                                                                                                                                                                                                                                                                     New humanised monoclonal antibodies (MAbs) comprising the complementary determining regions (CDRs) of a parental murine class regions (FRB) of a heterologous antibody which can be derived from any species including human, retain the anti-CBA binding specificity of the parental murine MAb but are less immunogenic in a human subject than the parental MAD. The humanised antibodies can be used in diagnosis, imaging and therapy of CBA-producing cancers and patients receiving the humanised antibodies and conjugates show improved therapeutic results, decreased immune responses and decreased immune responses and antibody. This sequence corresponds to the parent antibody. This sequence corresponds to the third framework region of the light chain of the humanised MAD. See AAR97313-97333.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present invention describes chimeric antibody (Ab) heavy (H) chains containing the variable region of the H chain of a mouse monoclonal Ab recognising human tissue factor (hFF) and the constant region of the H chain of a human Ab. The variable region is one of six specified sequences (which are the H chain variable regions from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). Also described are chimeric Ab light (L) chains containing the variable region of the L chain of a mouse monoclonal Ab recognising human tissue factor (hTF) and the constant region of the L chain of a muse from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). The chimeric Ab's can be used for the treatment and prevention of thrombotic disease, especially of the treatment and prevention of thrombotic disease, especially of the treatment and prevention of thrombotic disease, especially of the high MTF binding activity of the mouse monoclonal antibody but greatly reduced immunogenicity. AAX23301 and Y527707 to AAX23767 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human tissue factor; TF; humanised; antibody; mouse monoclonal antibody;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes chimeric antibody (Ab) heavy (H) chains containing the variable region of the H chain of a mouse monoclonal Ab recognising human tissue factor (hTF) and the constant region of the H chain of a human Ab. The variable region is one of six specified sequences (which are the H chain variable regions from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). Also described are chimeric Ab light (L) chains containing the variable region of the L chain of a mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Humanised antibody recognizing human tissue factor, used for treatment of disseminated intravascular coagulation \,

ö
monoclonal Ab recognising human tissue factor (hTF) and the constant region of the L chain of a human Ab, the variable region being one of six specified sequences (which are the L chain variable regions from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). The chimeric Ab's can be used for the treatment and prevention of thrombotic disease, especially of disseminated intravascular coagulation (DTC). The humanissed antibody has the high hTF binding activity of the mouse monoclonal antibody but greatly reduced immunogenicity. AA233001 to AA233091 and Y527007 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   containing the variable region of the H chain of a mouse monoclonal Ab recognising human tissue factor (hTF) and the constant region of the H chain of a human Ab. The variable region is one of six specified sequences (which are the H chain versions from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). Also described are chimeric Ab light (L) chains containing the variable region of the L chain of a mouse monoclonal Ab recognising human tissue factor (hTF) and the constant region of the L chain of a human Ab, the variable regions from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). The chimeric Ab's can be used for the treatment and prevention of the Londonic disease, especially of disseminated intravascular coaquilation (DIC). The humanised antibody has the high hTF binding activity of the mouse monoclonal antibody but

The method comprises administering an antiancer agent (1) conjugated to an immunoplobulin product (11) that binds specifically to A33 and contains one or more of 13 specified complementarity determining regions (CDRs), given in AAB98262 to AAB9874. (1) has cytostatic activity. The method can be used for treating colon and stomach cancers. (11), or the nucleic acid encoding it, can be used directly, in unconjugated form, for immunotherapy of cancer, and, when labeled, for detection or diagnosis of diseases associated with A33 expression. AAH22218 to AAH22254 and AAB98230 to present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating cancers, particularly of stomach and colon, that express A33 antigen by administering conjugate of anticancer agent with specific immunoglobulin product

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6232522

GENERAL INFORMATION:
APPLICANT: James, Judith A.
APPLICANT: Scofield, R. H.
TITLE OF INVENTION: PEPTIDE INDUCTION OF AUTOIMMUNITYAND CLINICAL SYMPTOMATOLOG
NUMBER OF SEQUENCES: 127
CORRESPONDENCE ADDRESS:
                                                                                  APPLICANT: Kaul, Rajinder
APPLICANT: Cao, Guang Ping
APPLICANT: Balamurugan, Kuppareddi
APPLICANT: Balamurugan, Kuppareddi
APPLICANT: Michals-Matalon, Kimberlee
TITLE OF INVENTION: Aspartoacylase Gene, Protein, and
TITLE OF INVENTION: Methods of Screening for Mutations Associated with Canavan
TITLE OF INVENTION: Disease
NUMBER OF SEQUENCES: 68
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Cytochrome-c oxidase (EC 1.9.3.1) chain I - Xantusia vigilis mitochondrion (fragment) C; Species: mitochondrion Xantusia vigilis C; Date: 20-Sep-1999 #sequence_revision 20-Sep-1999 #text_change 11-May-2000 C; Accession: T14.223 R; Macey, J.R.; Larson, A.; Ananjeva, N.B.; Fang, Z.; Papenfuss, T.J. Mol. Biol. Evol. 14, 91-104, 1997 A; Title: Two novel gene orders and the role of light-strand replication in rearrangem A; Reference number: 217789; MUID:97153826
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         C;Accession: A59173
R;Desai, N.; Shankar, V.
submitted to the Protein Sequence Database, February 2000
A;Description: Single-strand-specific, guanylic acid preferential nuclease from Basid A;Reference number: A59173
A;Accession: A59173
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    $29735
polyphosphate--glucose phosphotransferase (EC 2.7.1.63) - Propionibacterium freudenre

A; Reference number: Pc2330; MUD:95201377
A; Accession: Pc2330
A; Molecule type: protein
A; Residues: 1-11 ckUs>
C; Comment: This enzyme hydrolyzes beta-(2-1) glycosidic linkages and acts in intermolecu
C; Keywords: glycosyltransferase; hexosyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      extracellular lipase - Pseudomonas aeruginosa (fragment)

Primary structure of two neuropeptide hormones with adipokinetic and
hypotrehalosemic activity isolated from the corpora cardiaca of horse
flies (Diptera).";
Proc. Natl. Acad. Sci. U.S. A 86:8161-8164(1889).
From THIS HORMONE, RELEASED FROM CELLS IN THE CORPORA
CARDIACA AFTER THE BEGINNING OF FLIGHT, CAUSES RELEASE OF
DIGLYCERIDES FROM THE FAT BODY AND THEN STIMULATES THE FLIGHT
MUSCLES TO USE THESE DIGLYCERIDES AS AN ENERGY SOURCE.
-: SIMILARITY: BELONGS TO THE AKH / HRTH / RPCH FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description
